

## Product data sheet

# TERRA RAKE

For loosening compacted infill and opening the turf surface. Compacting is broken up and the water can flow off again. Algae and moss are prevented from settling.

The TERRA RAKE is distinguished by its sturdy construction and durability. The TERRA RAKE is attached to the tractor with a category I and O three point linkage mounting. The high speed causes the dethatcher teeth to oscillate, which pulls the turf thatch out of the sod and lays it on the surface. The special spring steel teeth are arranged in five rows. This still allows sufficient space for work without blockage despite the narrow distance of 5/8" between the rows.

### TECHNICAL DATA

### TERRA RAKE

Working width in inches:	63"	83"
Mounting:	rear three point cat. I and O	
Weight in lbs. (approx.):	400	430
